

From everyday moments to meaningful insight.

A calm, joyful space where every neurodivergent child can be understood, supported and celebrated — with the people who care for them working from the same picture.

THE PROBLEM

Support for neurodivergent children is fragmented across parents, schools and therapists. Everyday observations — the moments that reveal what works — are lost in notebooks, group chats and email.

The result: slow EHCPs, repeated assessments, and support decisions made without a shared picture of the child.

THE PRODUCT

NeuroKids Space is a calm, joyful, GDPR-ready PWA that connects children, families, schools and therapists in one secure space.

It turns everyday moments — communication, sensory patterns, regulation, learning wins — into structured evidence and personalised support that professionals can act on.

THE FRAMEWORK

01 · OBSERVE	02 · NOTICE	03 · SUPPORT	04 · LEARN
Everyday moments captured by families, teachers and therapists.	Patterns, triggers and strengths surfaced across settings.	Personalised strategies and evidence for the conversations that matter.	Outcomes reviewed. What works is kept. What doesn't is retired.

AI suggests, humans decide.

The NeuroKids Intelligence & Insight Engine is decision support — not a replacement for parents, teachers or clinicians.

OUR APPROACH

Built from lived experience, designed for real-world support. Rule-based pattern recognition today, human-in-the-loop always.

Strict data isolation between production and demo. UK GDPR-aligned. No advertising. No selling of children's data. Ever.

TRACTION & STATUS

Pre-launch — pilot partners onboarding.

NeuroKids Space has progressed from concept to a working MVP, with development focused on preparing the platform for real-world use across families, schools and professionals.

Current focus: school-readiness, pilot partnerships, technical validation and development of the NeuroKids Intelligence & Insight Engine.
